*Percent change could not be calculated due to a zero count in the comparison period.

¹ Average Daily Population (ADP) – The average (mean) number of youth in detention on any given day during the period. ADP is the sum of each youth's days in detention during the period (including day of admission but excluding day of release), divided by the number of days during the period.

Please note that this report excludes all detention events involving Interstate and Out-of-State youth. It also excludes PINS, youth served at Industry, and youth served at Horizon Specialized Juvenile Detention Facility, the facility currently designated to serve New York City youth under the age of 18 who can no longer be housed at Rikers.

The ADPs reported here for New York City and Rest of State provide the average daily population of the facilities located in those regions. These ADPs will not match those shown in the *Juvenile Justice Detention Monitoring Reports* or the *Juvenile Justice Detention Stat Sheets* for NYC and ROS as those reports are run by the detained youth's home county rather than facility location.
